Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Ichihashi et al. (PN 5,062,454).

Regarding claims 1, 5 Ichihashi discloses a source of hydraulic pressure (See Abstract, Column 3 Lines 1-45); a hydraulic actuator (See Abstract, Column 3 Lines 1-45) which is actuated by hydraulic pressure; a fluid passage (See Abstract, Column 3 Lines 1-45) which is in communication with the source of hydraulic pressure and the hydraulic actuator; and a control valve (See Figure 1 (1), (2), (3)) which is disposed in the fluid passage for controlling (See Abstract, Column 3 Lines 1-45) the hydraulic pressure introduced to the actuator, the control valve comprising: a valve body (See Figure 1 (1)); and a filter member (See Figures 2-3 (41), (45)), the filter member having a hook (See Figure 2 (5)) provided at one end of the filter member, the filter member is held under a tension by the hook.

Regarding claim 2 Ichihashi discloses a filter portion (See Figure 3 (45)); and a frame (See Figure 2 (41)) portion provided around the filter portion, the frame portion comprises a synthetic resin.

Regarding claim 3 Ichihashi discloses the frame portion having a pair of main frames (See Figure 2 (41)) provided on both sides of the filter in the direction along longitudinal axis of the filter member and a plurality of crosspieces (See Figure 3 (42)) provided between the frames; and wherein the crosspieces are connecting (See Figure 2 (41), (42)) the main frames, and one of the crosspieces comprises the hook (See Figure 2 (5)).

Regarding claim 4 Ichihashi discloses the valve body having an annular groove (See Figure 1 (4)) in a circumferential direction of the valve body, the filter member is provided in the annular groove (See Figure 1 (4)).

Allowable Subject Matter

Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

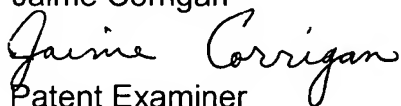

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Binder (PN 3,412,720), Kucmerosky (PN 3,247,967) disclose similar oil pressure control devices.
